for the evening meal, Rosary, and sleep. Electricity has made his time-table only slightly less dependent on the times of the rising and setting sun.

Increased spending-power, a more varied diet now including a variety of preserved and non-local foods, and the replacement of home-produced cotton by purchased materials for making clothes, have all contributed to the extension of shopping facilities in the villages. Apart from the 'general store', specialised shops have also made their appearance - butchers, pharmacists, clothing shops, and so on. The 1939-45 war brought flour and bread rationing and the end of home-baking - hence a further village specialisation (see p. 182). Since the War, the number of vans touring the countryside every week has increased rapidly to bring a variety of wares to the door of even the most lonely farmhouse. The *petrolju* van was early in the field, for the rural Maltese have long relied on paraffin for both cooking and such heating as the houses receive. Yet another addition in recent years to the diet of the poorer classes has been the free distributions of food (cheese, rice, corn-meal and flour) made by C.A.R.E. and by Catholic Relief Services (cheese, beans, flour, etc.), another organisation distributing surplus United States food supplies abroad.

Village housing is changing more slowly. The traditional Maltese rural home was a flat-roofed dwelling built round an enclosed courtyard, from which a staircase frequently led to an upper floor. The courtyard was the centre of domestic life and much of the regular work of the household was done here. A door, large enough to take a cart, opened on to the street. Windows on outside walls were small and rare. In many of the older parts of the villages, accommodation for animals and stores adjoins the rooms occupied by the family, the whole forming a compact economic and domestic unit. Water was carried from a village pump and sanitation, if any, was limited to independent cess-pits requiring periodic emptying. In winter such premises were liable to be very cold; in the heat of summer the rough roads of beaten earth readily produced a fine dust which can only have had harmful effects on the widespread trachoma and similar ailments.

Nowadays much of this survives only in the memory of the older people. Only some village streets in Gozo are not now surfaced; mains sewerage has been extended to all the larger villages of Malta; electricity is absent only in north-western Gozo; familiar red telephone kiosks have appeared all over the Islands; the larger villages in Malta have cinemas, in addition to much older Band Club buildings.

The essential features of the village society within which the Maltese farmer lives today may be summarised thus in conclusion:-

Economically, there has been a change from the independent, subsistent family unit to a diversified and inter-dependent occupational structure in the village, along with a realisation of the impossibility of maintaining Maltese agriculture in its traditional form without 'artificial' support. Materially, the village is seen to have benefited from a wide range of developments which have improved it as a place in which to live for the Maltese countryman with his now greater range of demands - and the buying-power with which to achieve them, thanks to war-time siege and subsequently to Government subsidy and guarantee. Socially, literacy and the awareness of a different way of life beyond the village have brought to the younger generation an intense dissatisfaction. Dissatisfaction not only with the social regime of the village, even in its present broadened and functionally diversified form, but also with the farming on which the community has depended.

Thus farming in its present form is waning and the Maltese farmer as he was in the recent past - and still is among the older generation - is a disappearing individual. If the clash between the present younger generation and the old order can be resolved and if the retreat from the land can be stemmed at all, a different kind of agriculture will emerge with a new type of farmer and a changed rural society.
